

EU EARLY ALERT - PESTICIDE REVIEW

December 11, 2025

Active ingredients used in pesticides within the European Union undergo mandatory review every 10-15 years. This process typically spans three or more years. Registrants are required to submit renewal applications no later than thirty-six months before the expiration date. During these reviews, substances are assessed against EU cut-off criteria. Triggering the cut-off criteria is likely to result in the removal of the pesticide from use in the EU and it can also result in the elimination of the associated Maximum Residue Levels (MRLs).

This document serves to provide advanced notification of active ingredients currently under review for renewal of approval in the EU. It also identifies substances that have expired, are nearing expiration, or face potential restrictions or non-renewal. While usage restrictions do not apply to US growers, MRLs for substances that have expired or are not approved may face future restrictions. Changes in MRLs resulting from EU restriction of approvals are monitored and detailed in the final table.

US exporters to the EU are strongly encouraged to monitor the MRL status of substances used on products destined for EU markets. The information presented in this report is based on publicly available data as of **November 30, 2025**. For further insights into this report, please consult the User Guide provided.

APPLICATION FOR RENEWAL – EXPECTED TO EXPIRE (Up to November 2026)

Chemical companies must support the review of their substances. Failure to do so will result in automatic expiration of the active ingredient in the EU on a specified date. For the substances listed below, registrants have either not submitted the application for renewal of approval or have withdrawn it, leading to the expiration of approval. This may impact corresponding MRLs. The expiration date of each substance is indicated in parentheses.

- **Methoxyfenozide** (March 31, 2026)

APPLICATION FOR RENEWAL - EXPIRED (December 2024 – November 2025)

Substances in this section **have already expired** due to **non-submission of application for renewal or withdrawal of application for renewal**. This list includes substances that have expired in the last year. Corresponding MRLs may be affected. Expiration date is outlined in parentheses.

- **Metaflumizone** (December 31, 2024)
- **Fenpyrazamine** (January 15, 2025)
- **Gamma Cyhalothrin** (March 31, 2025)
- **Meptyldinocap** (March 31, 2025)
- **Flufenacet** (June 10, 2025)
- **Penthiopyrad** (October 31, 2025)

UP NEXT FOR REVIEW (Up to November 2027)

Under the EU pesticide review program, the substances listed in this section are scheduled to go through the periodic review process. They have **upcoming deadlines for the submission of the application for renewal** listed below in parentheses.

- **Cypermethrin** (January 31, 2026)
- **Mefentrifluconazole** (March 20, 2026)
- **Flutianil** (April 14, 2026)
- **Florpyrauxifen-benzyl** * (July 24, 2026)

**Substance is exempted from a tolerance in the United States*

EU RENEWAL REVIEW: ACTIVE INGREDIENTS AT RISK OF APPROVAL RESTRICTION

These active ingredients are currently undergoing review for renewal of approval and have been presented by the European Commission for non-renewal or restricted renewal in the Standing Committee on Plants, Animals, Food and Feed (SCoPAFF) meeting. **This table does not list all substances currently under review¹ or those that have been proposed for renewal.** It's important to note that EU approval status applies exclusively to EU uses and does not affect US growers directly. However, the Maximum Residue Levels (MRLs) for substances that have expired or are not approved may face future restrictions. US exporters to the EU are encouraged to monitor the MRL status of substances applied to US products intended for the EU market. To verify the approval status of substances in the EU, please refer to the [EU Pesticides Database](#). Last updated on **November 30, 2025**.

Active Ingredient	Registrant	Proposed Approval Status	SCoPAFF – Legislation	Proposed Restricted or Non-renewal Notified to the WTO ¹
Flutolanil	Nichino Europe Co.	Proposed non-renewal due to missing data gaps. Consumer risk assessment could not be finalized.	Listed for discussion in December 2025 meeting.	
Buprofezin	Nichino Europe Co.	Proposed non-renewal due to endocrine-disrupting properties in humans and non-target organisms.	Listed for discussion in December 2025 meeting.	

¹ World Trade Organization (WTO) members have sixty days from date of notification to submit comments to proposed measure.

EU MRL RESTRICTION DUE TO APPROVAL STATUS

The active ingredients listed here are no longer approved for use in the EU due to expiration, restriction, or non-renewal of their approval. This table indicates whether EU actions regarding MRLs are being considered or have been implemented within the past year.² It does not encompass all EU MRL actions resulting from other initiatives, such as import tolerances or Codex harmonization requests. For detailed information on currently established MRLs in the EU, please consult the [FCID Regulatory Limits Database](#). Last updated on **November 30, 2025**.

No channels of trade provision included.	Channels of trade provision included for all commodities.	Channels of trade provision included for some commodities.	Review on hold
Some Codex and/or import tolerances were maintained.	Blank cells indicate no action has taken place.	Shaded cells include new information since last update.	

Active Ingredient	EU Registrant	Approval Status ³ (publication date)	SCoPAFF ⁴ – Residues (draft regulation presented)	Proposed MRL Notified to the WTO	MRL Restriction Implemented	MRL Restriction Effective Date
Abamectin	Task Force	Restricted renewal to greenhouse use based on high risk identified to aquatic organisms and wild terrestrial non-target organisms, others. (March 8, 2023)				
Acibenzolar S-methyl	Syngenta S.A.	Withdrawal of approval due to endocrine-disrupting attributes and its classification as toxic for reproduction, category 1B. (June 20, 2024)				

² Substances will be deleted from this table once the MRL restrictions have been implemented for more than six months.

³ The reasons for non-renewal or restriction of approval listed in the approval status column are not exhaustive. They reflect only the decisions made by EU authorities, which may differ from the conclusions of other regulatory authorities worldwide.

⁴ The Standing Committee on Plants, Animals, Food and Feed ([SCoPAFF](#)) is composed by representatives of all EU countries and presided by a European Commission representative. It delivers opinions on draft measures that the Commission intends to adopt. This section includes notes from the Section on Pesticide Residues agenda meeting up to November 24-25, 2025.

Active Ingredient	EU Registrant	Approval Status ³ (publication date)	SCoPAFF ⁴ – Residues (draft regulation presented)	Proposed MRL Notified to the WTO	MRL Restriction Implemented	MRL Restriction Effective Date
Alpha-Cypermethrin	BASF	Withdrawal of approval as the applicant did not submit the required confirmatory data. (May 17, 2021)	Draft presented for discussion in November 2025 meeting.	 12-Dec-23 		
Benfluralin	Gowan	Non-renewal based on long-term risk to birds and the genotoxic potential. (January 20, 2023)	Committee voted in favor of the proposed regulation at the June 2025 meeting.	 25-Mar-25		
Bifenthrin	FMC	Restricted renewal to greenhouse use based on potential bioaccumulation and biomagnification in the aquatic environment. (February 28, 2018)	Draft presented for discussion in November 2023 meeting.	 15-Dec-21 		
Captan	ADAMA, UPL	The EU reviewed the proposal and renewed the approval, including for outdoor uses. This substance will be deleted from this chart.				
Chlorpropham	Aceto Agricultural	Non-renewal due to potential for endocrine-disrupting properties and acute and chronic dietary risks for consumers. (June 18, 2019)	Draft presented for discussion in November 2024 meeting.	16-Dec-24	 16-Jun-25	06-Jan-26
Clothianidin	Sumitomo	Restricted to greenhouse use due to risk to bees. (May 29, 2018)	Committee voted in favor of the proposed regulation in September 2022.	06-Jul-22	 15-Feb-23	07-Mar-26
Clofentezine	ADAMA	Non-renewal due to endocrine-disrupting properties that may cause adverse effects in humans, as well as a high, long-term risk to birds and wild mammals. (November 8, 2023)				
Cyproconazole	Bayer AG	Expired on May 31, 2021, as the registrant withdrew the renewal application.	Committee voted in favor of the proposed regulation in April 2024.	 24-Jan-24		
Dimethomorph	BASF, UPL	Non-renewal based on multiple concerns, including its classification as toxic for reproduction, category 1B, and endocrine-disrupting properties. (April 20, 2024)				

Active Ingredient	EU Registrant	Approval Status ³ (publication date)	SCoPAFF ⁴ – Residues (draft regulation presented)	Proposed MRL Notified to the WTO	MRL Restriction Implemented	MRL Restriction Effective Date
Fenazaquin	Gowan	Restricted renewal to greenhouse and ornamental use only. (May 7, 2018)	Draft presented for a vote in November 2025 meeting.			
Fenbuconazole	Corteva	Expired on April 30, 2021, as the registrant did not apply for renewal.	Draft presented for discussion in April 2024 meeting.	2-Jul-24	 04-Feb-25 	24-Aug-25
Flubendiamide		Expired on August 31, 2024, as the registrant did not submit an application for renewal of approval.				
Flufenacet	CropScience AG	Non-renewal due to classification as an endocrine disruptor for humans and non-target organisms. High potential for groundwater contamination by flufenacet metabolite (TFA). (May 21, 2025)				
Glufosinate	BASF	Expired on July 31, 2018, as the registrant withdrew the renewal application.	New EFSA mandate for MRL review.			
Ipconazole	UPL	Withdrawal of approval due to classification as toxic for reproduction category 1B. (May 11, 2023)	Draft presented for a vote in February 2025 meeting.	16-Dec-24	 16-Jun-25	06-Jan-26
Malathion	FMC	Restricted renewal to greenhouse use based on high risk to birds. (October 8, 2018)				
Mancozeb	EU Mancozeb Task Force	Non-renewal based on classification as toxic for reproduction category 1B. (December 14, 2020)	Draft presented for discussion in April 2024 meeting.	 22-Jul-24 		
Metaflumizone	BASF	Expired on December 31, 2024, as the registrant did not submit an application for renewal of approval.				
Methoxyfenozide	Dow Agrisciences	Restricted renewal to greenhouse use based on classification as persistent and toxic. (January 31, 2019)	Draft presented for a vote in February 2025 meeting.	16-Dec-24	 16-Jun-25	06-Jan-26

Active Ingredient	EU Registrant	Approval Status ³ (publication date)	SCoPAFF ⁴ – Residues (draft regulation presented)	Proposed MRL Notified to the WTO	MRL Restriction Implemented	MRL Restriction Effective Date
Metiram	BASF	Non-renewal due to high risk to aquatic organisms and non-target arthropods, and exposure exceedance amongst operators, bystanders, and residents. (November 8, 2023)	Draft presented for discussion in April 2024 meeting.	 22-Jul-24 		
Metribuzin		Non-renewal of approval due to endocrine-disruption in humans and high risk of exposure to bystanders and residents. (November 4, 2024)	Draft presented for discussion in November 2025 meeting.	 04-Dec-25		
Myclobutanil	Corteva	Expired on May 31, 2021, as the registrant did not apply for renewal.	Draft presented for discussion in November 2024 meeting.			
Penflufen		Expired on January 31, 2024, as the registrant did not submit an application for renewal of approval.	Committee voted in favor of the proposed regulation at the June 2025 meeting.	 25-Mar-25		
Pyridalyl		Expired on June 30, 2024, as the registrant did not submit an application for renewal of approval.				
Quinoxifen	Dow	Non-renewal based on persistent, bioaccumulative and toxic; very persistent and very bioaccumulative; and persistent organic pollutant properties. (December 6, 2018)				
S-metolachlor	Syngenta	Non-renewal based on multiple concerns, including contamination of groundwater risk for earthworm-eating mammals. (January 3, 2024)	Draft presented for a vote in February 2025 meeting.	16-Dec-24	 16-Jun-25	06-Jan-26
Spinetoram	Corteva	Expired on June 30, 2024 as the registrant did not submit an application for renewal of approval.				
Spirodiclofen	Bayer AG	Expired on July 31, 2020, as the registrant did not apply for renewal.	Committee voted in favor of the proposed regulation in April 2024.	 24-Jan-24 		
Spiromesifen	Bayer AG	Expired on September 30, 2023, as the registrant did not apply for renewal.				

Active Ingredient	EU Registrant	Approval Status ³ (publication date)	SCoPAFF ⁴ – Residues (draft regulation presented)	Proposed MRL Notified to the WTO	MRL Restriction Implemented	MRL Restriction Effective Date
Spirotetramat		Expired on April 30, 2024, as the registrant did not apply for renewal.				
Sulfoxaflor	Corteva	Restricted renewal to greenhouse uses due to risk to bumble bees and solitary bees from outdoor uses. (April 28, 2022)				
Thiamethoxam	Syngenta	Restricted renewal to greenhouse use due to high risk to bees. (May 29, 2018)	Committee voted in favor of the proposed regulation in September 2022.	06-Jul-22	 15-Feb-23 	07-Mar-26
Thiophanate-methyl	Nisso	Expired on October 19, 2020, as the registrant withdrew the renewal application.	Draft presented for discussion in June 2025 meeting.	 23-Nov-23 		
Triflurosulfuron-methyl	Cheminova	Non-renewal based on multiple concerns, including groundwater metabolites and endocrine-disrupting properties in humans. (November 17, 2023)	Draft presented for a vote in February 2025 meeting.	16-Dec-24	 16-Jun-25	06-Jan-26
Zeta-Cypermethrin	FMC	Expired on December 1, 2020, as the registrant withdrew the renewal application.	Draft presented for discussion in November 2025 meeting.	 12-Dec-23
